

Get started with the Adobe Express and Frame.io integration

Use Workfront with Adobe Express to

- Streamline collaboration between creative, legal, and compliance teams to reduce time-to-publish while maintaining oversight
- Conduct for deep reviews using drawing markups, annotations, and commenting with the Workfront proofing viewer
- Meet enterprise compliance standards with electronic signatures and full audit logs
- Require approval on any remixed files from an Express branded template
- Map an Express template to a multi-stage review and approval workflow using unified approval templates in Workfront

Access requirements

Integration requirements

- You must have entitlements to access Adobe Express and at least one Workfront environment with a Workfront Standard license.

Set up approval workflows in Workfront

Before users can add an approval workflow on an Express template, a user with a Standard license must create an approval workflow template in Workfront.

For more information, see [Create an approval workflow template for documents](#).

Add an approval workflow to an Express templates

After an approval workflow template is created in Workfront, designers with an Express Enterprise premium license can assign it to an Express template directly within Adobe Express.

When a Express template is remixed, an approval will be required before publishing--automatically triggering the pre-configured approval workflow.

Users must have a Standard Workfront license to request approval from Adobe Express.

[Need link to Express help article on requesting approval]

Remix Express templates and send for review and approval

Adobe Express users can remix Express templates to fit their needs. Before publishing, they must request approval from the designated approvers.

Throughout the content production and review and approval process, users can

- See who has opened the file
- View the decision status of all participants
- Read comments
- and more

Choose a Workfront project when requesting approval

When requesting approval on a remixed Express template, users can choose a Workfront project to send the asset to. This helps keep all related assets and proofs organized within the same project.

If no project is selected, the asset will default into an Express-specific project.

Review and approve remixed Express files with Frame.io

Stakeholders can provide feedback relevant to their area of expertise—such as copy, legal, or brand—by using markup tools and comments in the Frame.io viewer.

They are also responsible for making final decisions to approve the content so it can be published.

Users must have at least Collaborator Workfront license to review and make a decision.

For more information on using the Frame.io viewer, see [Commenting on your media](#).
